

## GalliPro<sup>®</sup> Tect

**GALLIPRO<sup>®</sup> Tect is a science-based, research-proven probiotic**

- Reduces risk associated with necrotic enteritis
- Improves performance under *Clostridium perfringens* stress

**CHR HANSEN**

*Improving food & health*

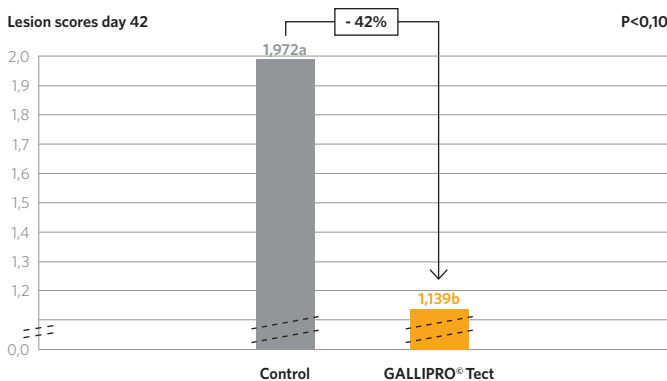

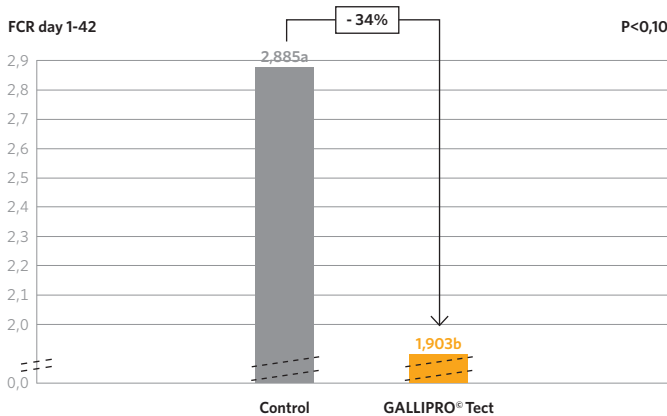

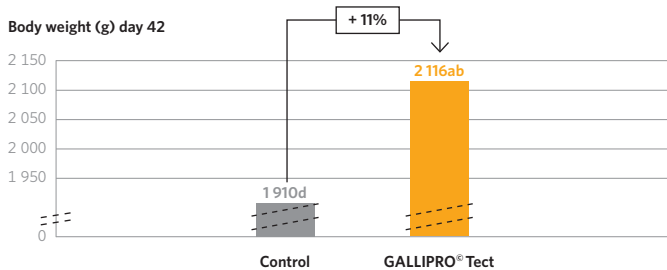

## About GALLIPRO® Tect

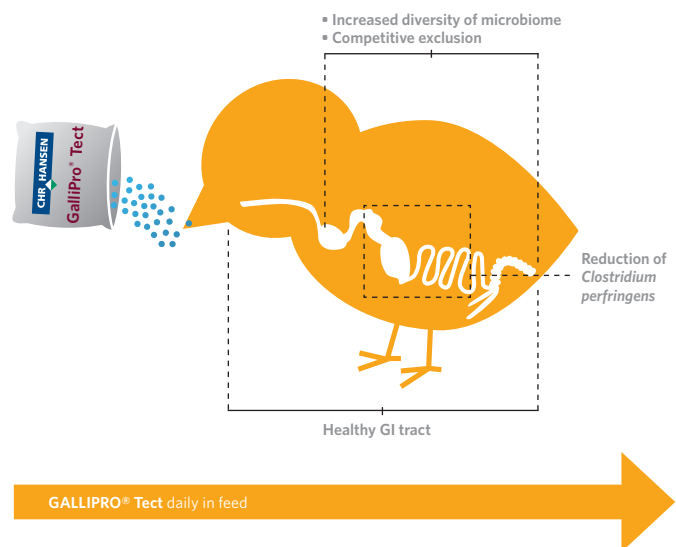

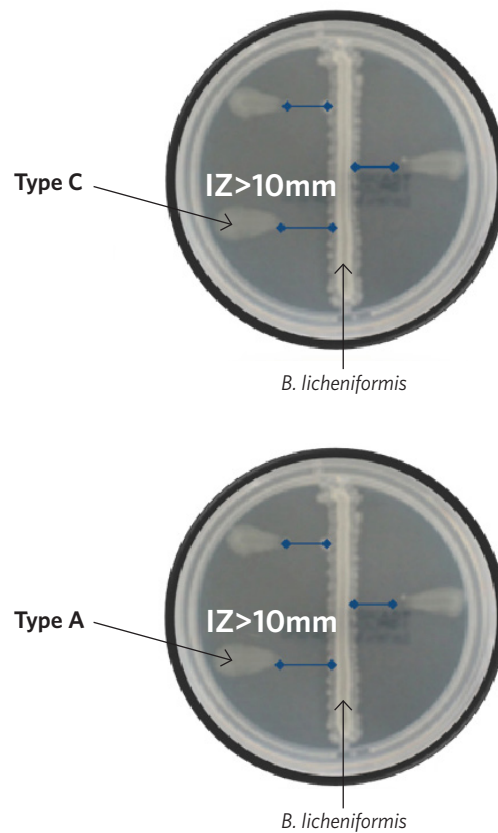

**GALLIPRO® Tect** contains a highly-selected strain of *Bacillus licheniformis*, (DSM 17236) that, when fed daily, has been proven to reduce the risk of necrotic enteritis (NE) due to *Clostridium perfringens*. Numerous trials showed that **GALLIPRO® Tect** improves flock performance with demonstrable economic benefits.

## GALLIPRO® Tect improves performance and reduces the risk of NE in the presence of *C. perfringens*

In a broiler study, under NE challenge, daily feeding of **GALLIPRO® Tect** resulted in improved performance, with significantly reduced Necrotic Enteritis lesion scores at 42 days of age. The highly-selected strain of *B. licheniformis* competitively inhibits the proliferation of *C. perfringens* and improves the stability and function of the GI tract. (F.Jin et al, 2017. International Poultry Scientific Forum).

In an in vitro research trial, **GALLIPRO® Tect** demonstrated the ability to inhibit the growth of *Clostridium perfringens* (Type A and Type C; Chr Hansen AH innovation, 2014)

- Used in premix, mash and/or pelleted feed
- Stable through the pelleting process up to 95°C
- Compatible with coccidiostats
